Information for Authors

Developmental Biology will publish in English original papers bearing on problems of velopment in the broadest sense; it will contain papers dealing with embryonic and stembryonic development, growth, regeneration, and tissue repair both of plants and mals. Papers dealing with reproductive biology and biology of aging that reveal fundantal mechanisms of general interest will also be published. The journal serves as a eting ground for studies on development that employ techniques from a wide range of ciplines, e.g., biochemistry, biophysics, cytology, experimental morphogenesis, atology, genetics, immunology, microbiology, pathology, pharmacology and physiol-. The journal aims for rapid publication; currently, publication time is 4–5 months m date of acceptance.

Articles should not exceed 15,000 words and should be accompanied by an abstract at gives, in 200 words or less, a synopsis of the work, including methods and results. *ief notes* are 2500 words or less including the bibliography, which should contain only references unless the abbreviated reference format is used (see directions under refer-ces). The conventional format is: abstract, introduction, methods and materials, re-lts, and discussion, but authors are encouraged to present their material in the most gical and appropriate form.

Figures should be numbered consecutively in the order of their appearance and each ould have a descriptive legend. Mark all figures with the author's name and address. *Line drawings* should be made with India ink on smooth white paper. Do not submit iginal line drawings larger in size than 13 × 10″; instead enclose smaller high quality ints for the printer and for editorial use (two copies). Be sure lettering is uniform and rge enough to allow for reduction and that the drawings when reduced will be either lumn (2⅝″) or page (5½″) width. A figure that is submitted 5¼″ wide with lettering mm high when reduced 50% will be a single column width. A figure submitted 11″ wide ith lettering 3 mm high when reduced 50% will be full page width.

Photographs submitted for publicaion must be the actual size for reproduction and refully labeled with letters 2–4 mm high. The page size of the journal must be con-dered and the following format observed.

) Column width figures are to be no wider than 2⅝″ or longer than 8″.

?) Page size figures should be 5½″ wide and no longer than 8″.

3) If the author decides to bleed the page (no margins), figure numbers should be no oser than ¾″ to the margin to allow for trimming during binding of the journal. Figures be bled must be 6⅞ × 10″ (submitted as 7 × 10¼″ to allow trimming); figures under ie size in either width or length will be trimmed to page or column size (see above). Use nmounted figures where possible, but when several appear together as one plate, nount them on cardboard or paper as close together as possible. The engraver will tool nin white lines between figures. Give magnification in the legend or indicate with a μ narker on the photograph. The author will defray the expense for colored plates. Two ages of half-tone figures per article will be published without cost to the author; a harge of $50 per page will be required for pages in excess of this number.

Tables should be used to condense data referred to in the text. They should be typed n separate pages, numbered consecutively with Arabic numerals in order of mention n the text, and collected at the end of the manuscript. Give each table a concise, de-criptive heading. Tables should be so composed that the content can be grasped with-ut reference to the text.

References to the literature may be cited in one of the following forms: Doe (1965) has bserved that . . . ; (Doe, 1955; Doe *et al.*, 1960); Doe 1961, p. 250). Use suffixes a, b,

etc. following the date to distinguish two or more works by the same author(s) in t same year (Doe, 1960a, b). Alternatively, references may be referred to by number: D (1) has observed that . . . (see also 5, 10, 16). Arrange literature citations in the biblio raphy alphabetically according to the surname of the author, using the following ord of items: author(s), date of publication, title of article or book, journal name, volun number, inclusive pages, publisher and city (for books only). Abbreviate titles of jou nals in accord with Chemical Abstracts' Service Source Index. Number the referenc only if they are referred to by number in the text. For a brief note with more than twel references, references in the text must be cited by number and titles omitted in the bib ography section.

Galley proof should be read carefully as no page proof will be sent to authors. Be ce tain figures are the correct size and correctly reproduced either as halftones or line dra ings and avoid excessive text changes that involve resetting. Reprints may be ordere when galley proof is returned. Fifty reprints are supplied gratis.

Manuscripts should be concise and consistent in style, spelling, and use of abbrevia tions. They must be typewritten, double-spaced, on one side of white bond paper abou $8\frac{1}{2} \times 11''$ in size, with the pages numbered consecutively. Indicate the address for galle proof. Include with full length articles a running headline not exceeding 35 letters an spaces. Use footnotes sparingly, if at all. Cite them, using superscript numbers, in con secutive order in the text and type them consecutively on a separate sheet. Acknowl edgments and figure legends should also be typed, double-spaced, as separate sections Two copies of the manuscript (original and carbon) and two copies of the figures shoul be mailed to Dr. Elizabeth D. Hay, Department of Anatomy, Harvard Medical Schoo Boston, Massachusetts 02115.
